

UNIVERSITY OF COLOMBO SCHOOL OF COMPUTING
Communication Skills – II (EN3106)

Lab 03 - LaTeX

1. Use the article document class to create the document.

`\documentclass{article}`

2. Use a graphic package to include figures.

`\usepackage{graphicx}`

3. The title of your report is **Artificial Intelligence and Robotics** and add Author name and today's date.

`\title{Artificial Intelligence and Robotics}`

`\author{Author's Name}`

`\begin{document}`

`\maketitle`

4. Add a simple abstract to reflect the contents of your document.

`\begin{abstract}`

This article provides an introduction to artificial intelligence, robotics, and research streams that examine the economic and organizational consequences of these and related technologies. **`\end{abstract}`**

5. Add the section called Introduction and the following content under Introduction .

`\section{Introduction}`

Artificial intelligence (AI) and robotics have become increasingly hot topics in the press and in academia.

6. Add an equation $\alpha = \sqrt{\beta}$

```
\begin{equation}
\label{simple_equation}
\alpha = \sqrt{\beta}
\end{equation}
```

7. Add a subsection called Robotics.

```
\subsection{Robotics}
```

The International Federation of Robots (IFR), an international industrial group focused on commercial robotics, defines an industrial robot as an “automatically controlled, reprogrammable, multipurpose manipulator, programmable in three or more axes, which can be either fixed in place or mobile for use in industrial automation applications.

8. Add a figure which is related to robotics into the above subsection with suitable referencing using the “ref” and the label features and give a suitable caption for the figure . Note that **{robot}** in **\includegraphics** tag is an image file “robot.png” located in the same directory as the tex file.

```
\begin{figure}
\centering
\includegraphics[width=3.0in]{robot}
\caption{The Future of Technology : Robotics}
\label{robotfigure}
\end{figure}
```

9. Add another section as Conclusion.

\section{Conclusion}

Artificial intelligence and robotics have experienced dramatic increases in performance, and this has led to greater funding for artificial intelligence and robotics start-ups, more popular press articles on how these technologies will change the world, and a recent increase in academic research around the consequences of these technologies for firms, workers, and economies.

10. Finally end the document.

\end{document}
